

Asset tracking... *simplified*

What is AssetTrakker?

A Microsoft® .NET web client developed to track any asset in and out of multiple locations with the use of a mouse or handheld computer (batch or RF).

Why AssetTrakker?

Your assets are your most valuable business resources and not being able to account for them in a timely manner can be costly. With AssetTrakker you have a clear window into where your assets are and who is responsible for them.

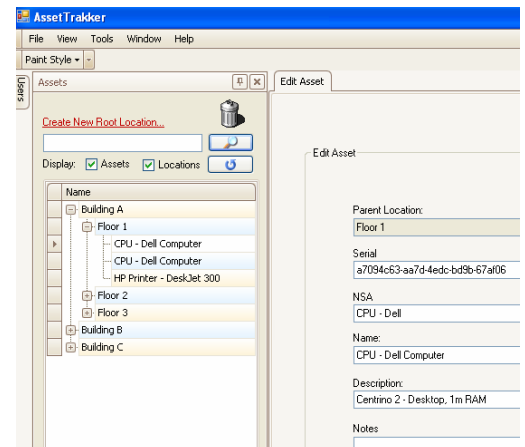

What is an asset...

An asset is anything owned by your organization. AssetTrakker can locate: capital assets like computers, printers, and LCDs. Assets also include medical equipment, important documents, tools, and furniture. Track them all with ease with one solution... AssetTrakker.

- Asset track any item to any location anywhere in the world at any time.
- Utilize barcode or RFID (Radio Frequency Identification) to easily move assets and take physical inventories. With RFID, your physical inventory consists of “wandering” your assets associated with an area.
- Manually moving assets from one location to another is done by using a mouse and “dragging and dropping” the asset into a new location.
- Strong database search tools allow a user to find an asset by serial number, name, description and several other identifiers.

AssetTrakker is one of several Microsoft® .NET projects developed by PICS (Profitable Inventory Control Systems, Inc.) PICS was incorporated in 1985 with the primary business objectives of producing, marketing, and supporting complete, turn-key inventory control and data collection solutions. The PICS' systems are designed to track raw materials, finished goods, process flow and assets using barcode, RFID, and wireless technologies. Over the years PICS had developed specific, vertically marketed solutions that continue to lead their individual market segments. PICS has continued to grow their business through the years by continued product development, marketing, and most importantly, strong customer referrals and word of mouth.

Service Features and Benefits

PICS supports your copy of AssetTrakker either by hosting the database on our enterprise class servers * or you can host the database yourself. No matter which method you choose anytime there is a new update or revision done for AssetTrakker you will be notified by a Windows © message asking if you want to upgrade to the latest version. Click yes, and it downloads automatically and it starts up as the new version.

Prior to the installation of the AssetTrakker on each PC via the web, the installer will download and install any required programs in order for AssetTrakker to function correctly. Everything is done automatically.

* If you choose to have PICS host your AssetTrakker database on their servers a monthly hosting fee will be charged.

TECHNICAL SUPPORT

PICS and their associated reseller base can help with any technical questions in regards to your AssetTrakker solution. Support is available during normal working hours.

INSTALLATION & SETUP

Through the use of remote access and .NET deployment tools PICS can deliver and install AssetTrakker over the web anywhere in the world. By setting up AssetTrakker remotely, time spent onsite with a client is used for training and hands on operation of the system.

TURNKEY SOLUTIONS

PICS can perform a complete turn key system integration including hardware and software installation, configuration, training and support. This includes any wireless infrastructure or RFID hardware.

System Requirements

- It is suggested that each computer have access to the Internet to take advantage of the automatic update features of AssetTrakker
- Microsoft .NET version 2.0
- PICS currently supports Motorola and Intermec handheld devices. Other PocketPC based terminals may be used if proper testing is performed prior to installation. Please see our website for a complete list of handhelds currently supported.
- Any Microsoft operating system from Windows 2000 to VISTA. Basic processing speeds are required. Pentium III processor with 512K RAM.
