

VICS_{MD}

Visual Inventory Control System

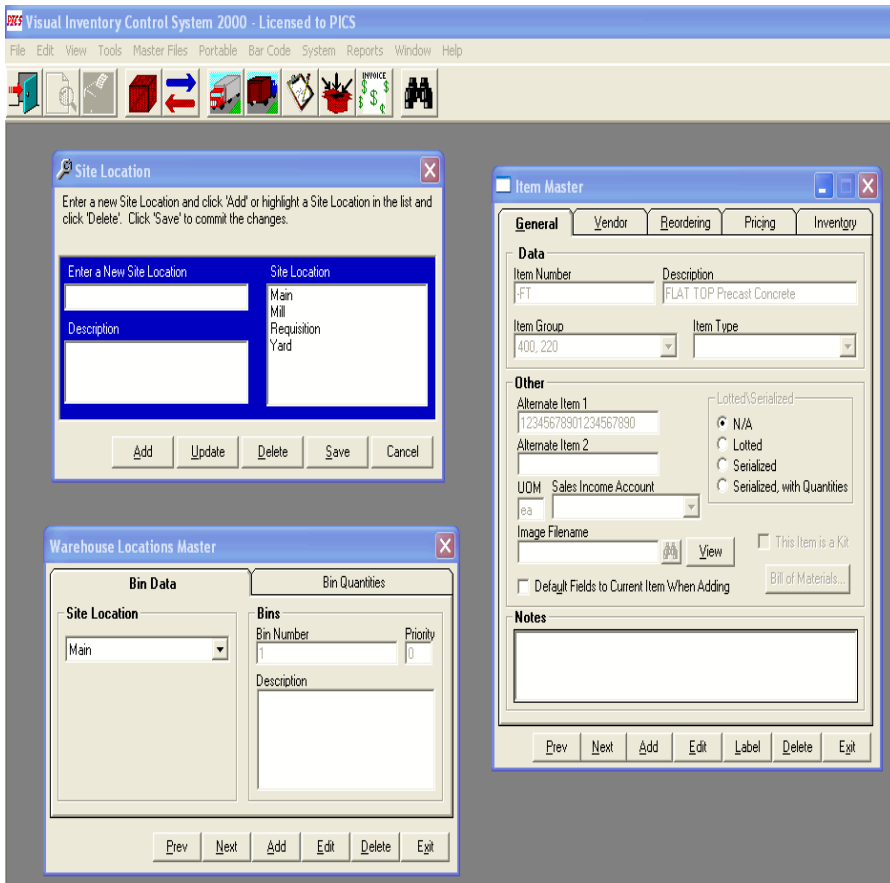

Save money and time using **VICSMD** to track and issue your medical inventory while also validating patient procedures are correct.

- Microsoft SQL-based medical inventory and patient / procedure validation software solution for clinics and hospitals.
- Uses bar codes to accurately receive, transfer, adjust, issue, inventory, pick, pack, and maintain inventory levels with little to no keypad entry.
- VICSMD allows access to the system to remotely enter orders and view data from anywhere in the world using a desktop computer or mobile handheld devices over wireless or cellular connections.
- Simple cycle counting and physical inventory methods make this daunting task easy and virtually error free. Track inventory in an unlimited number of offices, departments and BIN locations.
- Utilizes VPN and Remote Desktop technologies to connect multiple locations together.
- Can import and export to and from most accounting packages and ERP systems.

*End to end one of the most advanced and flexible inventory control solutions on the market.
VICSMD can track virtually anything, anywhere, with limited data entry and errors...*

VICSMD is part of a powerful selection of Client/Server based, inventory control, reporting, and management system software used by industry leaders including:

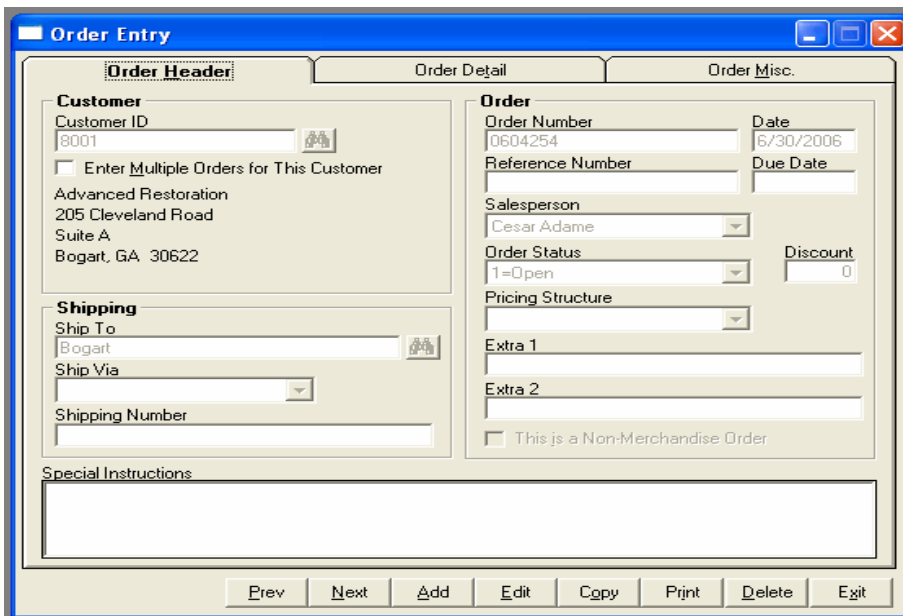

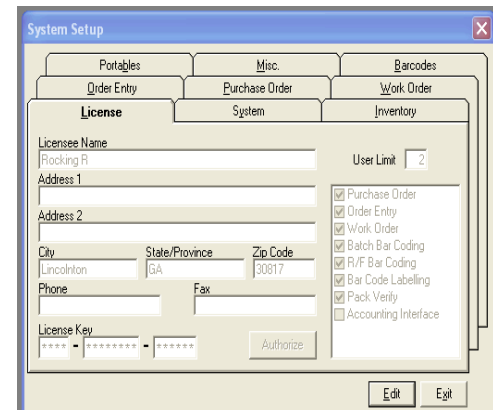

Set up your office , clinics or hospitals along with their unique BIN locations then add your items.

PICS can provide an initial data import of items, customers, vendors, whatever you currently have on file to reduce the amount of manual entry.

Wirelessly validate and move inventory by scanning patient ID and procedure barcodes.

Enter customer orders via desktop or remote order entry, print pick tickets, ship and invoice...

Use the PICS System Setup to customize your VICS SQL solution.
